Hello!
    I don't know if anyone before put a question about it but... Until now, I was compiling Upp apps with VS-2005 Express Edition. In a new computer, I've instaled VS-2008 Express Edition but Upp setup doesn't know about it.
    Is there any kind of additional steps to configure Upp with VS-2008.

Regards.
Juan.

Juan.

I recommend downloading "Vista SDK". Express Edition does not contain required libraries. Meanwhile, SDK containes the same commandline compiler.

Mirek

Ok... Thanks a lot. I'll do it. But, I don't use Windows Vista, so I use WXP.
Juan.

Juan.
Not a problem, AFAIK all you have to do is uncheck some items in setup to get rid of the Vista stuff. Even if you install all on a XP, you can still build and debug just fine, but you'll get a lot of stuff you may no need on your disk, like .NET tools.
