As TheIDE is now using svn.exe (plus a couple of its .dlls) we must not forget to add them....

Thanks.

In fact, meanwhile, I have reconsidered this. svn is not essential for normal users, those that need svn will likely install it separately anyway. And it would cost us almost 1MB in installation size.

So please, forget about this. No svn.exe with TheIDE...

With current implementation, what would happen in case of a conflict? Will it do that "mine" and "yours" stuff, or just fail?

Is full svn support planned to be incorporated in TheIDE? Because that would be killer...

What is "full support"?

Well, I think we will gradually increase the support. I would like to see revert, file history or "blame" support soon...

Anyway, the good news is that I am now using "usvn" for almost month and it looks like viable tool Most importantly, it fixed most of my svn issues...

I noticed that usvn adds files even if I have unchecked the corresponding check box.

cbpporter wrote on Sat, 06 September 2008 05:56I noticed that usvn adds files even if I have unchecked the corresponding check box.

Actually, from my experience, those checkboxes are not a good idea anyway. I think there should rather be "revert" button...

Just when I was going to suggest to add check boxes for "modify" too, so you have control over which files get modified and which don't.

Well, I am not sure... but IMO files is either modified intentionally or somethimes accidentally. In the first case, it needs to be committed, in second, it should be reverted.

I mean having TheIDE manage the SVN application for you; being able to loading a U++ application from SVN source. U++ would automatically recognize that a package is also part of a subversion repository and provide svn options for you. You would have the ability to issue SVN commands when working on an SVN file. For example, you delete a file from your package, it issues "svn delete <file>" also. You create a new file to a package, it adds it to svn. Also, commit, revert, etc. "buttons".

Take for example the svn plugin integration in Eclipse. Also, the tortoisesvn plugin in Eclipse provides additional options on Right-Click on a file or folder for svn actions.

Example screenshots for Eclipse:
 http://www.dokeos.com/wiki/index.php/Connecting_to_SVN_repos itory_(Eclipse)

Well, it already does, sort of....

Well, I have, at least for now, chosen different path - "usvn" is able to "fix" everything at sync time. Means, all new files are put into svn, all deleted files are deleted from svn etc...

Maybe you should try it first

Anyway, of course, some more options would be nice too, especially file history with diff and revert.

Oh that sounds pretty good too. I didn't know it was that far along where I was able to use it for our stuff here. I'll try it out.
