i have a proplem when my program want to clear array ctrl in a funcion

this is the function

```
void Two_B_DN::Update_list() {
    list_items.GoEnd();
    client.URL("http://www.cisclub.com/tecno/2BDN/data.xml");
    pro.SetText("Please Wait Loading Data...");
    client.Method(HttpClient::METHOD_GET);
    client.AddHeaders("Cache-Control: max-age=0\r\n");
    String respond = client.Execute(pro);
    //String respond = LoadFile("data.xml");
    my_xml = ParseXML(respond)("root");
    //PromptOK("ana hena");
    list_items.Clear();
    //PromptOK("ana hena");
    for (int i=0;i<my_xml.GetCount();i++) {

        String title = my_xml[i]["title"][0].GetText();
        //PromptOK("ana hena");
        int status_index = StrInt(my_xml[i]["status"][0].GetText());
        int priority_index =StrInt(my_xml[i]["priorty"][0].GetText());
        int person_index = StrInt(my_xml[i]["person"][0].GetText());
        //PromptOK("ana hena");
        String status = droplist_status.GetValue(status_index);

        String priority = droplist_priority.GetValue(priority_index);
        String person = droplist_persons.GetValue(person_index);
        /*
        PromptOK(title);
        PromptOK(status);
        PromptOK(priority);
        PromptOK(person);
        */
        list_items.Add(title,status,priority,person);

    }
    client.Close();
    pro.Close();
    list_items.SetCursor(0);
}
```

the first time i call it it works ok but the second time this error appears

this error happens

I do not see a problem in the code you have posted.

The error you have encountered is a result of retrieving value (using ArrayCtrl::Get) from *current* row when there is no current row ("IsCursor").

Of course, immediately after Clear there cannot be any cursor... but there is no Get in your code either

Mirek

may be the error in this code

```
void Two_B_DN::Send_list() {
    list_items.GoEnd();
    String xmlfile = "<root>";
    PromptOK(IntStr(list_items.GetCount()));
    for (int i=0;i<list_items.GetCount();i++) {
        xmlfile += "<item>";
        xmlfile += AddTag(list_items.Get(i,0).ToString(),"title");
        xmlfile += AddTag(IntStr(droplist_status.Find(list_items.Get(i,1))), "status");
        xmlfile += AddTag(IntStr(droplist_priority.Find(list_items.Get(i,2))), "priority");
        xmlfile += AddTag(IntStr(droplist_persons.Find(list_items.Get(i,3))), "person");
        xmlfile += "</item>";
    }
    xmlfile += "</root>";
    //SaveFile("data.xml",xmlfile);
    client.URL("http://www.cisclub.com/tecno/");
    client.Method(HttpClient::METHOD_POST);
    client.AddHeaders("Content-Type: application/x-www-form-urlencoded\r\n");
    HttpQuery message;
```

```
message.SetString("data",xmlfile);
client.PostData(message.GetQuery(true));
pro.SetText("please wait ....Sending");
String respond = client.Execute(pro);
client.Close();
pro.Close();

//SaveFile("respond.html",respond);
}
```

thxthe proplem was that there is callback that make it crash

i edited the code of the function that is called and now it works fine
