You can try

```
void LaunchWebBrowser(const String& url);
```

or just plain system.

Mirek

Something I used for testing out this functionality... try some things out.

```
int ExternalPing(String addr){
    String ret;
    String cmdline = String().Cat() << "ping.exe -n 3" << addr;
    Cout() << "Starting Process: " << cmdline << "\n";
    One<SlaveProcess> sp = StartProcess(cmdline);
    while(sp->IsRunning()){
        Sleep(100);
        if(sp->Read(ret)){
            Cout() << ret;
        }
    }
    Cout() << "\n";
    return sp->GetExitCode();
}
```
