is there a way to view some html in U++

Not yet, except launching a webbrowser

void   LaunchWebBrowser(const String& url);

See discussion threads concerning webkit.

Hi,

That's a great question; it would be great if the Rich Text control could open & edit HTML files.

It definitely would. All it takes is an experienced programmed spending some time creating

RichText ParseHTML(const String&);

function

(Now seriously, I know about the issue and I will eventually do it some time in future, but I am afraid there are more important issue right now...)
