hello all

i have a function that download a file and update GUI

i made 2 threads

the first to call this function and the second to wait for the first thread and after finishing the first thread it calls the function again to download another file

but after downloading first file this error appears

please help me as this problem annoys me very much

i don't understand what is the main thread but GUI updating is in a gate in httpclient executerredirect method

thanks for repleing

You cannot (at least with current U++).

You have to use PostCallback to communicate with the main thread.

Mirek
