Subject: Assist autocomplete cause program crash.

I had a complex templated class with multiple inheritance:
template<typename T>
class MultiArg : public Pte<MultiArg<T>>, public TArg, public Vector<Value>{
When I use "this->" in a class method definition and the autocomplete menu attempts to show, the program crashes.
I've removed the Pte<MultiArg<T>> because it is not needed and then assist works fine and there are no crashes. While may nothave been correct to use both Pte and Vector, it shouldn't have crashed.

Cannot reproduce...

I have established a new "parsertst" directory in svn.

Maybe you could create a smaller example and put it there.

(It is also possible that recent developments fixed this problem..)
