I've tested this feature, but it seems to disapeer?? after a while. My GridCtrl gets also very slow when scrolling within.

Are there known issues with this new feature an how can i switch it on and off?

Although I didn't exerieence any slowdowns I know there are a few places when popuping can be improved. I'll try to optimize them and let you know. I will also add Popups(on/off) method.
