After I study this file. Maybe...

IMHO, PHP is the most stupid programming language on earth. It's like going into rubbish bin...
Have a look:

Maybe for time beeing you could use "message navigator" by entering "newer than"=1 and "older than"=2 ?

Ok, I did it. Not very correctly, I guess, but it's possible to use. Try and tell how it works. Especially, for people in different time zones. Because I haven't studied the whole mechanism of server, messages and user time zones.

Also, maybe it would be better to show today's and yesterday's posts together?

Well, it works great, however, maybe "yesterday" is not the right word.

I believe it should rather be "recent posts" (or "24-hour digest").

Mirek
