Hi, I've added few lines to Chameleon (in ChWin32.cpp) to fix how menu(MenuBar) is showed under Vista. I'm attaching a patch for it and also a copy of UWord which use new menu style to see the difference. You may compare it with Paint(native application) and also with current menu of TheIde or other application made with Upp under Vista to see the difference.

Andrei

Is there a reason why this patch hasn't been applied yet? I think it looks better and it's more "native"
