Subject: Sqlite Column Types

I changed some code in my copy of the Sqlite3upp.cpp file to correctly assign a column type for use in the the GetColumnInfo() function.

In the procedure:
Vector<SqlColumnInfo> Sqlite3Session::EnumColumns(String database, String table)

Replace:
info.type = STRING_V;

With this:
```
switch (sqlite3_column_type(s, i)) {
   case 1:
      info.type = INT_V;
      break;
   case 2:
      info.type = DOUBLE_V;
      break;
   default:
      info.type = STRING_V;
}
```

This sets blobs to STRING_V still because I don't see a blob type constant in upp.

Thanks.

Blob is String, that is OK.
