Hi,

In order to close a tab when middle mouse button is clicked, would be great to have GetTab method as protected instead of private.

An example...

```
class TabCustom : public TabCtrl
{
    TabCustom() : TabCtrl() {};

    void MiddleDown(Point p, dword keyflags);
};

void TabCustom::MiddleDown(Point p, dword keyflags)
{
    // when middle button is pressed on a tab, close it
    RemoveTab(GetTab(p));
}
```

OK, it is now public...
