Subject: [Shared]WebCam
Posted by kasome on Sun, 19 Oct 2008 02:51:07 GMT

I made this program "WebCam" by U++ and videoInput library to read image from usb web camera.Some features can not be used (such as take picture, and face detection), because I do not have time to write, I'm sorry.

You can distribute or modify this program(including source code) for any purpose without my permission.
Just feel free to use it.

Thanks to Ultimate++.

Execute File:(Update msvcr80.dll to fix some crash problem)
http://www.mediafire.com/?y2wz3cumnbo

Source Code:
http://www.mediafire.com/?tzm2dgbmt20

Some part(icon or image) of this program is get from Internet directly.
If the program violated your copyright, please let me know and I will as soon as possible to remove the file.

My E-mail is:

Hello kasome

I have tried the exe and it runs well.

To compile it I would like you to tell us the libraries you have used and if they work in linux. I have seen video input library and also Open CV.

Best regards
Koldo

Sorry, it's my fault.

OpenCV is Open Source Computer Vision Library. It can be used to Image processing, Pattern Recognition, Machine Learning...,etc.

OpenCV use BSD License, and it can work on Windows and Linux.

OpenCV (CVS version) can get from here:

1.download TortoiseCVS, and install.

2.use cmd.exe in Windows XP,type the follwing instructions

cvs -d:pserver:anonymous@opencvlibrary.cvs.sourceforge.net:/cvsroot/opencvlibrary login

Press Enter for No password

cvs -z3 -d:pserver:anonymous@opencvlibrary.cvs.sourceforge.net:/cvsroot/opencvlibrary co -P opencv

3.Use VS 2005 to open "OpenCV_make\opencv.vs2005.sln", and compiled to generate libs and dlls

4.if you have any problem about OpenCV, you can go to OpenCV Groups in Yahoo:

http://tech.groups.yahoo.com/group/OpenCV/messages

videoInput is a free windows video capture library, and it can't work on linux, i guess.

you can get the library videoInput from the office site:

http://muonics.net/school/spring05/videoInput/

or just download the header file and libs I have already compiled.

http://www.mediafire.com/?fr3m7w47mc2

By the way, i have to take military service tomorrow, and i'm not sure if i can access Internet in the military. If you still have problem, i will try my best to reply as soon as i could access Internet.

Thanks. You are welcome.

If you or other people still have problem to compile WebCam, i hope the following file could help you.

Source Code(including header and libs of OpenCV and videoInput):
http://www.mediafire.com/?tzgdxm9mwhw

Package organizer:

PATH:

Include:

Lib:
