Subject: Proposal: search in Help window

Proposal is simple. Many help articles are rather long and reside many screens. If some spicific thing is needed, it is commonly hard to find and takes minutes of scrolling. It would be great to have "Find"/Ctrl-F feature for Help window text too.

I can't stand the U++ Help viewer, it feels so awkward and obsolete almost in every aspect when compared to firefox, except it can be better connected to source code. But anything else is pain in *body part*.
So whenever I can, I use the Manual pages from web, I'm using the help inside IDE only when I'm really desperate.

Thinking about it, maybe it would be possible even to connect TheIDE to firefox with some firefox extension... but I'm not going to bother, it's not that important for me to make it worth of effort.
