Hi,

when I try to compile my program with a fresh copy of U++ svn and an up-to-date Ubuntu 8.10 with gcc-4.3 I get the following error in release mode:

/home/christian/Desktop/upp/uppsrc/Core/Stream.cpp:1306:

open with O_CREAT in second argument needs 3 a
 rguments

Here you can find more infos: https://wiki.ubuntu.com/CompilerFlags#-D_FORTIFY_SOURCE=2
I don't know which flags are needed so I just point you in the right direction.

There was such an error in previous svn revisions but was solved. So, make an svn update.
Thanks anyway for reporting it.
The problem was related to parameters from "open" function, if flag O_CREAT is set, open function takes 3 parameters else it take 2 (well 3 but last is ignored).
