Hello!

I think that file Core/OI_Set.cpp wich contain:

```
///BLITZ_PROHIBIT

#ifdef flagNONamespace
namespace Upp {
#endif

void Set__(volatile bool& b)
{
    //WriteMemoryBarrier should be here
    b = true;
}

#ifdef flagNONamespace
};
#endif
```

will be great to change in this:

```
///BLITZ_PROHIBIT

NAMESPACE_UPP

void Set__(volatile bool& b)
{
    //WriteMemoryBarrier should be here
    b = true;
}

END_UPP_NAMESPACE
```

Now, the functionality is identical, but in future when will need to add changes, will be great to change only Core.Core.h!

Well, the only problem is that UPP_NAMESPACE is undefined there

Anyway, I think that we will soon drop those UPP_NAMESPACE macros - they were introduced as prudent path in case previous 'non-namespace' mode of U++ would be required by any of existing apps - that never happened.

In fact, the only thing that stops me doing it is the size of svn commit after the change
