```
Hello!
I think that file Core/OI_Set.cpp wich contain:
//#BLITZ_PROHIBIT
#ifndef flagNONAMESPACE
namespace Upp {
#endif
void Set__(volatile bool& b)
//WriteMemoryBarrier should be here
b = true:
#ifndef flagNONAMESPACE
};
#endif
will be great to change in this:
//#BLITZ_PROHIBIT
NAMESPACE UPP
void Set (volatile bool& b)
//WriteMemoryBarrier should be here
b = true;
}
```

Now, the functionality is identical, but in future when will need to add changes, will be great to change only Core.Core.h!

Well, the only problem is that UPP\_NAMESPACE is undefined there

END\_UPP\_NAMESPACE

Anyway, I think that we will soon drop those UPP\_NAMESPACE macros - they were introduced as prudent path in case previous 'non-namespace' mode of U++ would be required by any of existing apps - that never happened.

In fact, the only thing that stops me doing it is the size of svn commit after the change
