I installed MSC on a computer today and I'm getting a very strange issue with a compiled TheIDE. The new code browser area is replaced with a Button, and the bottom part is wrong also. Recompiling with MINGW removes the issue.

Here's a screen shot:

And I've found another issue. Using auto detect build methods for MSC8 fails when TheIDE is run under a limited user account. If someone points me to the code that does the auto detecting I can check out what operation can't be executed because of lack of privileges.

I have checked with MSC9, it looks OK.

Maybe you can try to rebuild all (if you have not yet) or delete .cfg.

I use MSC8. all its ok!

What version of svn build do you use? standard build from <http://ultimatepp.org/svnbuilds/>?

Now I'm having a new problem: when debugging under MSC8 setting I get an error message that gdb could not be launched, and after I press OK TheIDE crashes.

Anybody else ever got this?

I reinstalled 2008.1, checked out sources from SVN and recompiled everything while running all tools as administrator and all issues are gone. Unfortunately, now I'm stuck with running TheIDE as administrator if I want it to work and have to enter a painfully long password each time, but at least I can continue to work and debug stuff. I'll have to verify somehow if the issues were caused by the limited account or some other circumstances.
