```
Upp2008.1/WinXP
Create project
[bug.upp]
file
separator1 readonly separator,
file1.h,
separator2 readonly separator,
file1.cpp;
```

```
mainconfig
"" = "";
```

if we collapse separator1 and try to rename file1.cpp into file2.cpp we will have funny result:

```
[bug.upp]
file
separator1 readonly separator,
file1.h,
file2.cpp readonly separator,
file1.cpp;
```

```
mainconfig
"" = "";
```

instead of renaming file1.cpp into file2.cpp we will have separator2 renamed.
Rename operation get wrong index of element for renaming in case of collapsed separators.
