Subject: Unicode chars in Fedora rawhide

Hello,

I have installed new Fedora rawhide and when I wanted to write a czech char with caron to source file in the IDE nothing happened. So I modify X11Proc.cpp to allow unicode chars - see attached file. It works for me fine.

Is it possible to change this file like this?

Radek

(Fedora Rawhide 9.93, IDE svn 643)

Interesting indeed, I would expect the "xic" variant to be triggered - at least that is what happens on ubuntu (it works there).

Anyway, patch applied.

keyboard chars.
I have to find why "xic" variant doesn't be triggered.

I've instaled scim to Fedora and unicode chars starts to work. "xic" is triggered and Xutf8LookupString is used.

I've instaled scim to Fedora and unicode chars starts to work. "xic" is triggered and Xutf8LookupString is used.

So it was not U++ bug after all?

What is 'scim' anyway?

What is 'scim' anyway?

Smart Common Input Method, we have that installed in Ubuntu by default.
