Hi,

I just tried to use a vertical Slider, but cannot find a solution to switch the min/max - Position.

I want that the Slider and the Progressbar show the same level, but starting from the bottom not from the top. Without changes the minimum starts on top and the maximum is at the bottom of the Slider.

Is there a solution for this idea?

regards

reinhard

What about switching the values you get? I mean, using (max - ~slider)?

thanks,

in my case: max - slider - min

but I have to get the value of the slider first to an integer, otherwise I get an error ...

"ambiguous overload of 'operator-' in ...

candidates are:  
operator-(int,double)  
operator-(int,int)  
operator-(int,Upp::int64)

regards

reinhard

You can us cast "(int)slider".
