As soon as i heard U++ from one of my friends, i tried it but found some language support problem about Chinese.

The errors come from a sort of *.t files, with some lines like:

which seem to be resource strings. The error messages like:

C:\upp\uppsrc\CtrlLib/CtrlLib.t(2430) : error C2001: newline in constant

The demo applications i built would could not be compiled and executed unless i commented these lines like above.

When posting such issues could you please post operating system version and compiler version. Also the version of U++.

This is known stupid problem of MSC compiler.

The only known workaround is to switch your windows to english locales.
