Subject: Crash when using Microsoft's Virtual Desktop Manager [BUG]

I love to use Virtual Desktop Managers for increased productivity. As of now, the free Microsoft Virtual Desktop Manager is having problems with theIDE. If I switch to a different desktop while running theIDE, the main window does not repaint itself when I return to the Desktop with theIDE in it. I have to close out of the program and reopen it for everything to work properly.

602Beta4
Windows XP SP2

I have downloaded VDM, but have problem to reproduce the bug. Must be more conditions for that to happen that just switching desktop (also, please try with the latest version).

Has this bug ever been tracked down? I am having the same problem with 2007.1 beta 3 on WinXP. If I am running theide, switch to another virtual desktop, then switch back, theide will eat up all my CPU cycles and be unable to redraw itself. The only way to close the program is through Task Manager.

WinXP SP2

nVidia 6150LE
