
Subject: GridCtrl - crashes on UBUNTU.

I find it unpleasant behavior CridCtrl.

If the cell can not contain it based text, the GridCtrl paints a right triangle, which shows that not everything fits. When we hold the mouse on top of the cell - that is showing the entire contents in the pop-up window.

But this happens only in Windows.

When I try to do the same in UBUNTU - I failed.

System crashes with message:

Assertion failed in\upp-svn/CtrlCore/X11Wnd.cpp, line 380

As TestCase can get tutorial Grid01.

I think this is an error in the basic functionality.

Maybe advise how to correct, or even how to hide this functionality?

Thanks in advance.

PS.

In ArrayCtrl - nothing of the sort not seen.

To analyze the differences in approach on my lack of experience. Please help.

Yep, it's possible. I haven't tested this feature on X11. You can turn popups off using Popups or CellPopups method (I don't remember exactly);

BTW: In dev version popups works on header too.

PS: Thanks for finding bugs! It makes my apps more stable

I could not find anything similar. This must be set for the entire Ctrl or on the Cell?

During debug GridCtrl I noticed that happens twice a call GridPopUp::PopUp. I replaced the call GridPopUp::PopUp on GridPopUp::PopUpWnd (I rename anywhere) but now everything is occurs twice call GridPopUp::PopUpWnd - and the second time - the crash happens.

Maybe second time during draw shadow or anything not open window (create but not open)???

Sorry for misleading you. There is no such a method.. I'll provide one.

I'll try to add variable property
bool popuex;
and I'll try add popuex(bool b = true){}.

Done. Temporary Solved.

Changed files in Attachment (based on svn-643)

There are 2 files in upp/uppsrc/GridCtrl/ :
GridCtrl.h
and
GridCtrl.cpp

I did not very accurately, perhaps popups banned in the Drag and Drop.
But it WORK!!!

However, is hopefully to resolve the problem.

Thank you Daniel for tips and idea.
