I split "Image tutorial 1" code to "h" & "cpp" file and had some link error: "multiple definition".

```
C:/upp/out/Image01/MINGW.Debug.Debug_full.Gui.Main\main.o: In function
`_ZN8MyImages3lmlEv':
C:/upp/uppsrc/Draw/iml_source.h:33: multiple definition of `MyImages::lml()'
C:/upp/out/Image01/MINGW.Debug.Debug_full.Gui.Main/image.o:C:/upp/uppsrc/Draw/iml_source
.h:33: first defined here
...
...
```

After executing TheIDE, compiling It was success at first time. I modify something then compile it was fail.

It both happened on Ubuntu and Windows using gcc.
The Attachment is a sample code.

But I move the definition

```
#define IMAGECLASS MyImages
#define IMAGEFILE <Image01/images.iml>
#include <Draw/iml.h>
```

from .h to .cpp. then it is success all the time.
so...maybe this is not a bug?

Thank you for creating so useful tool.

You have to put in header
#include <Draw/iml_header.h>
and
#include <Draw/iml_source.h>
in *.cpp file instead of #include <Draw/iml.h>
which is used when you have to use images in one file.

BTW, theide recently can insert those includes for you (right-click on the text, "Insert").
