Subject: Change variables value during debug
Posted by pippo on Tue, 30 Dec 2008 15:23:06 GMT

I see very important can to change the variables value during the debuging!

Now , in the "watch/explorer/local/auto" I can only read the variables value, but no change it.
But why? Visual studio do it, and also TheIDE on Linux (n debug I can press ctrl-q to immediate
view and so I can also put a expression), but on windows not do it...

How I can do this?

Andrea
