I'm displaying some data within a GridCtrl. Now i want to select a row after pressing a key.

For example i have 4 rows with names:

```
-----col1----col2  
row1 Michael Muller  
row2 Albert Meier  
row3 Hubert Heimer  
row4 Silke Super
```

Now i want to press H and it would be great when row 3 would be selected. How can i realize this?

You can use Select* methods eg:
grid.Select(0, 15)

Ok, but first i want to find the matching row. How can i find the first row which starts with H?

You can manually iterate over all grid rows:

```
FOREACH_ROW(grid)  
{  
    if(String(grid(NAME)).StartsWith("W"))  
    {  
        grid.Select(grid.GetCurrentRow());  
    }  
}
```

Probably there is no StartsWith method, but generally you can do it in this way.

This is what i have now:

```
FOREACH_ROW(datagrid)
{
  if(String(datagrid(1)).IsEqual("Hubert"))
  {
    datagrid.SetCursor(datagrid.GetCurrentRow());
    datagrid.SelectRow();
    datagrid.SetFocus();
  }
}
```

Now the row with Hubert at col1 is selected, but there is another problem: I use this code to make my next query:

```
activeCustomer = IntStr(datagrid.Get(2));
```

```
CreateDatagrid("Server");
SelectData("*", "Server", KUNDE == activeCustomer, ALIAS);
```

ActiveCustomer should be "Heimer", but it's not.

Is datagrid.get(col) the right method to get the value of an selected row? Hope you can follow me...
