Hi,

how to detect memory leaks when I run debug mode compiled with mingw? nor console project neither gui application wont report leak even for simple char* buf = new char[10] line

Avoid trouble and download Win32 SDK...

Seriously, now when free windows SDK containes C++ compiler, I see little reasons to support mingw anymore. It is a lot of trouble...

It's easier to stay with mingw if you develop primarily in linux... I often find my sources can't be compiled by MSCC without some minor syntax sugar, so I would prefer mingw working well. But I can understand it's lot of tedious work.
