Hi,

I usually do not use this ide but I have given it a go again....
Here it is what I found. I wonder if someone can tell me how solve these ones.

1. I have been looking for goto line functionality. How to do that?
2. Are there bookmarks in this programs? How to use them?
3. In the debugger, I tried to watch a variable which is in a namespace , I could not... How to do that?
I tried mynamespace::varname . I got back there was no such id.
4. Are there memorybreakpoints? How to use them?
5. Is there a way of going back to the previous editing position?

Thanks.

1. Ctrl+G
2. Yes. Press Ctrl+Alt+(Number) to set and Ctrl+(Number) to go to bookmark. Bookmarks are global within all opened files (as far as I remember).
- 3,4,5 - hope someone more competent will answer these.

Oh, Ctrl+G

I was surprised by the many symbols that appeared then..

5. Is there a way of going back to the previous editing position?

Close is Alt+ <- (Alt+ -> gets you back again). Works over any number of "jumps", e.g. via Alt+J or Alt+I.
