Compiler: MSVC8

32-bit TheIDE.

No problems with 32-bit applications.
Can compile and launch x64 application in debugging mode. TheIDE crashes on exit of a debugging application.

64-bit TheIDE.

No problems with 64-bit applications.

All applications build with different versions of TheIDE run fine without TheIDE.

Thanks for report.

Hm, now this is interesting. IMO, it should be possible to debug 64-bit apps in 32-bit ide, but it never worked.

If it is possible to get it working, then the most obvious idea is to stay 32-bit with windows ide, right?

That's right. I've even spent 15 minutes trying to debug TheIDE in TheIDE. No luck yet, but the idea seems to be interesting.
