I don't know if this is a bug but this is very stange.

How to produce it :
- create a new CtrlLib App with layout
- edit code and keep editing cursor between function call braces. (Assist++ tooltip is displayed)
- Launch the app

You will see this

An other problem is when i display my desktop the tooltip is again on screen....

Where is the problem ?

I do have this issue too.
It looks like tooltip is not minimized along with it`s parent window. Also tooltip looks like foreground windows which lies above all other windows, but it`s not what we wait from them: they must overpaint parent window contents only.
