Hi,

I use watches now. I noticed if I restart debugging , then the watches are deleted....
I think it is bug... I think it is good if you know that...

Also, watches could be remembered for the next session, program run.
Watches also could be saved/loaded....

I think it's not a bug (it just works this way), but it would be great if your ideas were implemented.

Yes , it would be very nice.
An other cool feature would be drag & drop expressions from editor to watches tab.

I do not understand...
Drag and Drop?

Cut and past works now. What difference would that make?

I will try to implement this.

Ok, I have implemented it...

The watch list and the history of explorer are stored
in the common path directory... per main package

It is also possible to load/save the watch list using
the pop up menu...

It works for the microsoft debugger only.

I attached the solution.

The attached files belong to the ide/debuggers directory.

Completeness. D&D is expected, so it should work...

Mirek

And it works now, with all other issues...

Mirek
