Hello,

i have a layout consisting of a few EditStrings and a GridCtrl.

How can i get the GridCtrl to set the first cell on input, if the user TABs into it? I mean, focus is first on an EditString field, and user hits TAB. Now the focus gets to the GridCtrl, and i want the GridCtrl to immediately activate the first Cell, without the user having to hit Enter first?

Greetings,
Matthias

Hi

There is no direct support for this action in GridCtrl, but here's what you can do:

```
struct MyGridCtrl : GridCtrl {  
    virtual void GotFoucs() {  
        GridCtrl::GotFocus();  
        StartEdit();  
    }  
}
```
