Hello,

I'm doing a competition results management soft for my favourite sport (spear fishing) and I encounter problems when trying to chain several panels in order to dynamically add/modify things.

the error is encountered is the following:

SQL Error : "cannot commit transaction - SQL statements in progress"

Error statement: "COMMIT;"

I made an example project where the problem happens.  
To reproduce the problem do the following:

Start soft

--> push [COMPETITER]

--> push [MODIFY CLUBS]

--> modify a club city name

--> Return

====> Error msg appears

I'm new to SQL programming, so my error is probably due to low level knowledge, but what I want to do is simple and I know it is possible so where is my error ???

Thanks

This is a bug in Sqlite3 U++ code. (sort of misunderstanding of sqlite3 API).

It is now fixed and fix will be uploaded to svn at the end of week; meanwhile I am posting two files to be replaced in Sqlite3 directory.

Thanks for the quick reply !

I'll try it right now.

Mean while I found a work around for the problem: do a sql.Clear()  
before calling the chained panel.

Was this valid or was I just lucky ?

Didier

OK, quick and neat !

Thanks again!
