Hi,

I had this the code which seems to break the code browser

```
#define std_oper operator

std::ostream& std_oper << (std::ostream& os, const hash_map<string, string>& h)
{
  for (hash_map<string, string>::const_iterator i = h.begin();i != h.end();i++)
  {
    os << ( * i).first << ( * i).second;
  }
  return os;
}
```

If this is insert into a file, then no functions ,etc are listed in goto window after this code...

The problem seems to be caused by std_oper << .....

I tested beta1 and current svn...

Well, we do not replace macros (yet).
