Hi,

How can I move cursor left or right inside EditString ?

I have tried to use GetCursor and SetCursor, but just wondering is there more cleaner way to do that ?

Thnx,
Sasa

For what purpose? (Reply might depend on it

I think SetSelection is one possible way. You could also just invoke Key(K_LEFT, 1), but that is of course a little bit nasty...

Sorry for delay...

I was making MASK edit, and SetSelection has done the trick (sending keys was out of question). It is derived from EditString and working fine (test cases).

I will try to finish it over the weekend and post it here, maybe someone will find it useful.
