hi,

is there any way to find out when and which column was Right clicked on the header ?

I am creating some DB browse control and need that as a way to set filter on desired column...if I made my self clear, lol....

Thx,  
Sasa

I see in the arrayctrl documentation the function  
GetClickColumn()

that return the last clicked column in the array, have you tried?

Hi,

I need to detect Right click on the header control.

I think you can set the WhenBar callback for each column, and use that to detect right mouse clicks. It should still work even if you don't want to create a menu:

```
header.Add("Column 1").WhenBar = THISBACK1(OnColumnRightDown, 1)
```

```
void OnColumnRightDown(Bar &bar, int columnix) {  
...  
}
```

That has sorted it, thanks.
