Hi,

I would like to report more bugs...

For multiline strings,
the syntax highlighter does not work.
Also, the assist/parser does not seem to know about multilines strings..

Assist broke on a multiline string found in my code.
I know because when I removed the multiline string, the goto started to list all functions again.

Meanwhile I figured out what was wrong with assist...

In cppbase,cpplex.cpp was not right...

Basically, parser has problems with any multiline string that contains a tab. Then the multiline string is detected as faulty...

I changed line 326...

from
if((byte)*ptr < ' ') {

for
if((byte)*ptr < ' ' && *ptr!=9) {

Sounds reasonable, thanks...

BTW, it is line 323 in my sources - maybe you are not using latest U++ from svn?

Anyway, considering highlighting problem, I see nothing wrong. Could you paste me some code here that highlighter gets wrong?

Mirek

Here you are...

```
"\
abstract,\
 alias,\
 align,\
 asm,\
 assert,\
 auto,\
 body,\
 bool,\
 break"
```

this should be one token.
It is not. I checked the syntax highlighter.
It is not implemented. Not in the version I have.
