[View Forum Message](#) <> [Reply to Message](#)

Hi everybody,

with nightly builds and tremendous improvements in U++, I think it is time to reconsider little PR. Recently, we have been mostly silent for almost 1 year, not announcements or anything anywhere, no releases.

I guess it was a good time for "silent work", but now when we are approaching a shiny new U++, maybe we could try to be a very little bit more noisy.

For starters, I think there should be someone that would care about freshmeat and usenet announcements.

Basically, I think that "weekly review" of svn changes between nightly-builds would be ok.

I mean, take this log:

<http://code.google.com/p/upp-mirror/source/list>

between last announced revision and last release, adapt (remove uninteresting elements, edit those interesting), submit to freshmeat and to some relevant usenet conferences. (Maybe, USENET could be less frequent to avoid annoying people).

Of course, the first announcement will have to be a bit "bigger"

This is simple but quite boring work, but it would make BIG difference.

Regarding PR, I am also considering:

- Deprecating the project name "Ultimate++" and using U++ only in the future. I am afraid that Ultimate++ does not sound seriously enough for many.
- Redesigning U++ logo (it is pretty old now)
- Redesigning U++ frontpage. I think that the general style of website is quite OK, but maybe we should put info there.

Any other suggestions are welcome. Just please, do not expect me to do everything

Mirek

[View Forum Message](#) <> [Reply to Message](#)

I think before drawing attention to U++ we should get prepared to explain that U++ is not just a cool C++ library and an extremely useful developer's tool, but also a system, which is completely different from everything else that C++ developers got used to use.

Otherwise we will have to answer the same questions over and over again.

It took me a lot of time to realize how huge is the difference between U++ and everything else.

Novo, I'm totally agree with you. But how can we do it? The only way I think of is creating short but succinct text (may be with short code examples). Something like "Wetting your appetite" from TheIDE Manual, but even more effective.

I'm not saying we should be afraid of that. I'm just saying we better list these differences (and detailed explanations) and put this list in an unavoidable place.

Otherwise we will have to answer the same questions over and over again.

It took me a lot of time to realize how huge is the difference between U++ and everything else.

Just for someone, it is important that while the novelty product, Ultimatepp is 100% C++ language with strict syntax.

For me, as I understand it, it was a very important factor.

There is no need to hurry up with the change of the logo. The new logo does not bear a message that this is a continuity with the C++ (unlike the old).

Also, when I first installed the product, I have long sought to know what the name of the menu? Correct! - Ultimate++! But it was not there! The menu was another unknown word - TheIDE! I think this a big mistake. Better would be to write the menu - Ultimate++, or perhaps - Ultimate++ TheIDE.

Even in the letters to our visitors, the signatures must be kept - Ultimate++ team. Everywhere!

And I think the loss is impermissible, then that site does not send notifications of new messages in subscribed threads in the mail. People read the forum and went - and then a letter - "means Ultimate - it works!". It is very important!

When a promotion commercial project - creating a website that collect the money (actually preferred product for the money) and a few sites that do not sell, but simply organize "fish place" for the target audience (the place where people congregate target audience) and which for that very target audience periodically quietly throw the message on the product sold.

Of course there is not expected to take the money, but can be used similar PR technology.

Mirek

Oh NO!

Ultimate++ - sounds (unlike U++). You can say it. This is yet another media vehicle.

I think you need to add more sections of the type of "Getting Started" (I do not know at this site or another).

And need more sections, which describe the benefits to me, rolling from another tool, which helps to quickly achieve the goal to Ultimate++.

Again, comparing the PR technology with the commercial product - creates a separate series of documentation - Documentation for the promotion of vendors, promotion documentation for journalists, while not explicitly called for one of those articles, but each category of readers usually know exactly its documentation.

And for beginners, and the above categories of readers are not important nuances of change in the SVN code (as it may seem sad).

For them, the goods - the very innovative approach to C++, and technology development programs in general. So it is necessary to give them their goods (I repeat - perhaps not on this site, by the way feel like to have as a link to all the project sites).

We can give an example of a product Mozilla.

There are sites:

- www.mozilla.com
- www.mozilla.org
- www.mozilla-europe.com
- help.mozilla.org
- develop.mozilla.org

.....

and so on..

I'm not sure what to exactly the same sites as in Mozilla. But the idea - is clear.

1) There is no need to hurry up with the change of the logo.
2) The new logo does not bear a message that this is a continuity with the C++ (unlike the old).
3) Better would be to write the menu - Ultimate++, or perhaps - Ultimate++ TheIDE. Even in the letters to our visitors, the signatures must be kept - Ultimate++ team. Everywhere!.. People read the forum and went - and then a letter - "means Ultimate - it works!".
1) I must disagree. Current logo is of former 90's style. Please look at the modern logos, see the difference. There's no need for such an advanced framework (maybe the most advanced one for C++) to have old-looking logo.
Redesign is even more a task because of (3).

2) All the logos have C++ signature inside of them. It was my aim to have C++ inside of U++ logo.

3) luzr wrote on Fri, 20 March 2009 12:29 Deprecating the project name "Ultimate++" and using U++ only in the future. I am afraid that Ultimate++ does not sound seriously enough for many.

Regarding logo, I might have been a little bit specific.

I think we should basically keep that little graphics:

<http://www.ultimatepp.org/1i.png>

but change the text. Of course, some minor update of graphics would be nice. But over, I think the shape is quite characteristic.

What really feels outdated is:

http://www.ultimatepp.org/index.html_0.png

This logo is not the logo. This is the first picture for the cover of the booklet. Or for flashwindow. The logo should be more strict. The logo must not lose the idea and when printing on grayscale printer, or even on 2-color printer.

Perhaps for the site to use the graphic idea of the image would be quite good.

luzr wrote on Sun, 22 March 2009 12:02Or this:

As Mirek suggested, a horseshoe magnet with two ++ at heads, something like this image.(with ++).

The design of site is too old. We need something more modern.
Like KDE, QTSoftware, Gnome, CodeBlocks...

Also first page should contain a short description of project and news updated daily or weekly about the project, new releases, community announcements and so on. The content of site should be more organized (now it is split into 11 sections which contain more sub-sections). A new forum would be nice, because this one has some problems, like showing me online long after i've logout, sometimes some messages are not shown, number of most users online in one day is almost double of current registered users. So we should extract information from it which is of actuality and use a new forum. In that way we know also the exact number of U++ users I'm thinking also at a bug reporting tool and let the forum only for trouble that users have. After these modifications I think U++ will become a more serious project.

No, do not need such revolutionary changes. Forum - excellent. A separate forum for bugs - unnecessary. Moreover, it is not quite in the style of community Ultimate. And in the style of Ultimate - no bugs and bug-reports, and if necessary future - then do it himself.

You don't understand me in some ways... I don't want a separate forum for bug reports what I want is something like Track, useful when reporting bugs and also useful for feature request. In

that way the majority of users like to interact with project developers and that's the fact why U++ is not mainstream (as some people reminded in past posts) and wide used. Even if you do a great software if you don't make it accessible to majority, it's almost nothing because just some select clients will benefit from it.

About new forum... I think current forum is old. It was released in 19 September 2006. So 3 years is enough for it. How you reflect the "innovations" which U++ and how you demonstrate it when U++ have an old forum and informations from site are mostly outdated.

I don't want to create a list with U++ shortcomings here (maybe i will start one) but I don't see how we have an increasing community if informations we provide are outdated and old-class infos and we don't get in step with changes.

Just my 0.99\$

Completely agree. I would have proposed to expand the news RSS feed. And make a special section of news, news of which could be placed at other news sites (to name a section of press releases).

And more. Versions are available too rare. If you look at the process of release from the company Microsoft - then these guys are not seriously disturbed by the fact that after release had to release service pack. I think this is a good practice. It is too rarely go steady - still are working on SVN version - hence the meaning of a stable version - remains a bit.

If you do not like the name - the stable version, then let him be a beta version. In any case, release of a new beta version can be reflected in the press release or news, and provide all the commentary that in this case, the beta version is almost a working version. Through RSS feeds it will be regularly updated on news and Open Source sites. Strongly increasing popularity.

Concept of FUD forum is very interesting and very flexible! In administration menu you can build new theme and language pack, edit or add new functionality based on template construction!
The best way about forum I think we need to add new sections... or group messages in "wish list" with states and priority, "bug report" and other.
News lent with new changes on the first page.
About U++ we need to improve the documentation, maintain new practice and modern examples!
On the first page I think we need to write first 10 proposes most important why U++ is good!
The most important, we need to add mechanisms to import projects from other IDEs (Visual Studio, Code::Block, KDevelop and other).

People! do not need more to develop a magnetic subject.

A magnet does not pass any commonality with U++ or with C++.

And the symbol ++ is not obvious.

Another point. Thick enough to cross - is associated with the Swiss cross and not with the plus sign.
Lines of crosses to be thinner.

I think 2 plus sign should be close (together) - this is what made sense in the designation of the language C++.

Subject: Re: PR!

I think we should build on what we have.

1. Logo should remain the same. It's not like we are changing anything in the framework, we are just trying to promote it. But the style of the logo is old. Modern logo's have gradients and realistic shading. Check out what Oxygen/KDE did with their icons, or how Vista updated the icon for Notepad from the Windows 95 look.

I think I saw some updated icons in an old thread somewhere on the forum, but I can't find it again.

Touching up the logo should be no big deal. If one of us can't do it, a struggling young artist will do a great job for a small amount of money.

2. The forum should stay. It is both an adequate platform of communication and an archive of a lot of valuable information. Going through it and archiving some old threads would be in order, but that is a monumental task and I don't think anybody has the resources or patience to do it.

3. We do need some great introductory articles which must address the most important aspects that differentiate U++ from other frameworks, like:

- why do we re implement STL? Couldn't we have developed a compromise solution, using STL as much as possible and adding just a few containers, like Movable enabled ones? Couldn't we have used STL naming conventions and iterators? I know STL containers don't have a virtual destructor, but that doesn't mean you can't inherit and modify behavior. Sure, there are some restrictions, but we could have retrofitted some standard containers with some useful methods.
- why do we use default pick semantics? Won't it cause a lot of problems? Big learning curve and hidden bugs? Design pattern books say that this is a bad practice. And it is in a world of default copy construction, so we need to highlight that the framework is more or less capable of handling pick semantics without issues because it was designed that way. This issue is going to be hard to "market". I've been using U++ for quite some time now, and while I think that copy constructing should not be enforced on a STL level, we should have left = as default copy construct and only use pick with and explicit picking method/operator.
- why don't we have a couple of libs and some .h. Everybody does that. "Source based distribution? Why? I don't want to recompile everything. What is this, the kernel? You're just lazy!". We need to explain the advantages of U++ modularity. Also BLITZ must be handled with care. It is not well received in a business environment and managers tend to avoid it.
- why do we allocate everything on the stack? This makes a lot of common pattern harder to use. U++ doesn't play nice with things like abstract factories if we follow our style, and if we adopt their style, we loose a lot of U++'s advantages and simplicity.
- leaving aside NTL, why do we implement a new set of widgets? We could have used one of the existing toolkits and expand upon it. Even better question: leaving aside details and language differences, what can U++ widgets do that Gtk ones can't? Gtk is used everywhere, and GtkMM should be a better supported equivalent of U++, right? Such questions will arise, and different environments will have different levels of resistance. For Windows development, most people I know that do C++ would ask: "Another set of widgets? What version of MFC is it built upon? I can't be better than ToolKit Pro."

And the list could go on and on. What I'm trying to say is that U++ is different, and we need to show this and also why it is good thing. If we create false expectations, we won't get anything more than a temporary interest.

U++ plays very nicely with abstract factories, following its style...

OTOH, maybe that is the point. We should make a document explaining how U++ style alters some common patterns, especially those that are seemingly hard to do in "stack" based U++.

The common motto IMO should be something along

"U++ containers replace GC"

Can we prepare a list? Maybe in separate thread (starting it now in Docs).

Hi there,

just finished the reworked logo and so I have seen Mirek has already chosen the magnetic one.

I will upload the fireball logo just for free use to everyone.

It's done in inkscape.

Hello,

I like this fireball logo personally.

I made the text in italic just to show a different version that I prefer a bit :

Lionel

I like the letters a lot. And I generally like fireballs too.

I'm just scratching my head what does the fireball have with U++ and what kind of message is sending it to the viewer.

So while from visual point of view I quite like it, I just wonder whether it's possible to do something similar with more appropriate symbol. But I have no idea for a good new symbol.

I can not draw, maybe someone who knows how to draw to extend this idea ...

Only... I wanted to sort of "depracete" 'ultimate' word. Going for plain 'U' only.

Well, I have made more modifications to TheIDE splashscreen - check tomorrow. To me, it feels quit fresh

Maybe we should change the logo more often...

Mirek

andrei_natanael wrote on Sun, 22 March 2009 08:50Also first page should contain a short description of project and news updated daily or weekly about the project, new releases, community announcements and so on.

That sounds good and nice, but please note that nobody volunteered to take care about freshmeat announcements yet.

I too would like to have more actual frontpage content, but there must be somebody that manages it. I am failing at that task..

In any case, great plans are nice, but I would rather approached this whole PR issue step by step. I believe that the most critical issue right now is to start regular freshmeat updates.

Hello all

I think that it is true that Google plays changing its logo but it is also true that they always play with the same basic shape.

I think that to maintain a clear logo is always good, as the logo is an important part of the project identity. A robust logo is part of a robust project.

I do not have a clear opinion about the shape of a logo, I am not an aesthetic specialist, but it is really great the job that you are doing.

About other efforts I am opened to help. Luzr has talked about freshmeat announcements. I do not know how it is done, but if somebody can explain it to me, or there is another thing to do, I would like to "put my shoulder to the wheel".

Best regards
Koldo

[View Forum Message](#) <> [Reply to Message](#)

Agreed. I'm searching optimal U++ logo solution. And it is just 3rd approach, not a 3rd logo itself. May be well designed and styled (not a sample above) horseshoe will become a shiny new U++ logo one day. As soon as I make (a-kind-of) final version, it will be better to ask U++ authors what do they think about it. For now I'm interested mostly in the direction of thinking - what everyone think about horseshoe-logo idea itself.

[View Forum Message](#) <> [Reply to Message](#)

Yes, it would be good. But IMO it is the second step after making final version of logo itself. Currently I'd like to contribute more finalized and "appropriate" version of horseshoe-idea, but just have no time for this as I'm on detached service for week or more.

[View Forum Message](#) <> [Reply to Message](#)

OK, another one iteration towards logo. I wonder if it is right direction I`m moving. Please give any feedback you want (horseshoe idea, it`s realization - whether it is better than magnet or not), especially critics, as it is vital to know - deny this solution or keep it and make some polishing.

Subject: Re: PR!

Posted by [Didier](#) on Sat, 16 May 2009 09:36:11 GMT

[View Forum Message](#) <> [Reply to Message](#)

For me it's the magnet

When one sees the logo, he there must be a link with the subject. And the first thing I think about is horses . Which is quite far from a C++ IDE. A least the magnet is linked to electronics.

Maybe in blue steel or bleu lighthning it would be better

luzr wrote on Sat, 16 May 2009 12:47magnet is good as well, so I am going to keep it for month or two, then adopt this logo (again, for some time). So, any plans for "final"/permanent logo? What are requirements for it?

IMO it is better to have one (and good) logo to advertise it. Make it a kind of recognizable brand.

There is no need to change this logo. All excellent.

I had an idea, the logo is slightly pulled in 3D, and part of the logo, color filled, to make a transparent colored glass.

And the rest - all excellent.

For some applications, it is useful to 3D version of the logo. For example, for Splash screen. But it will be to the taste of community.

Out of curiosity, I tried to redraw the TheIDE logo.

I'm not sure it's good, actually I'm not sure it's even better than the current one, but I think it's probably at least worth posting, so here it is.

I think it's cleaner and a bit more pleasing to eye, but whether that's good for TheIDE, I'm not sure. (and I'm too lazy to try to build the one with my icon and use it for while)

32x32:

16x16:

I'm not an artist, so sorry if it's bad, just dismiss it then

Koldo, I couldn't make any modern looking version of "classic" U++ logo (box + 2 rulers).

Personally I don't find it fit well into concept (but it is U++ authors who decide of course).

So after rendering magnet and horseshoe I was out of ideas. Maybe if you have some fresh idea, I could render it.

Personally I consider Mirek's magnet a good idea, but I think it should be U++ authors decision about it all. After we render and discuss final logo, we could discuss "developed ..." logo.

Hello Mindtraveller

I would like to use some variation of your last logo in MediaPlayer control. Its use could be like the famous VLC traffic cone.

It is not necessary to have a clapperboard or a negative, or yes?. Just giving the idea of movement.

As an artist, what do you propose ?

As an artist, what do you propose ?

Hello, Koldo!

You may use this logo with anything connected with U++, if you wish to.

Talking about default image for video control, I would say it is a matter of application GUI style.

Some may require one, some may consider it needless. Most of time, if we talk about general use and professionally-looking GUI, any uncustomizable, external big colorful images in app are harmful.

I would recommend making this image 1) optional and 2) customizable and 3) close to app GUI style.

The clapperboard or negative are not needed here. You may use make this logo almost transparent and paint it above ordinary SColorFace() color. You may use small version of this logo as logo in one of the corners of your control. This will look much more pfoessional than any Linux-like fancy pictures inside controls (Windows GUIs passed this approach in 1990's).

P.S. Personally I don't like this picture much either. Regretfully I don't know how to make it better, as I'm not professional artist.
