Subject: Child window position

I tried in every way to set the position of a ControlOkCancelLayout, but every time the window is opening at the center of the application.
SetPos, SetFramePos, SetRect, SetFrameRect... I don't know how to move that window!

The only difference is whent i do a noCenter on the new layout, and it's opening in Top and left part of the monitor, but I can't be able to move it.

Thanks to everyone

Are you trying to set the window position before calling CtrlLayout? CtrlLayout calls GetRect, so you must make your changes after it:

```
CtrlLayoutOKCancel(*this, "Window title");
// Set only the size of the window
Rect r = GetRect();
r.SetSize(100, 100);
SetRect(r);

// Set size and position
SetRect(50, 50, 200, 200);
NoCenter();
```
