Hello,

In TreeCtrl.cpp of Upp2008.1 it seems to be bug that may crash application (by assertion in Vector) in some situations when closing the tree node. It looks like in code at line 418:

```
if(treesize != sb.GetTotal()) {  
    sb.SetTotal(treesize);  
    Refresh();  
}  
cursor = -1;
```

there should be:

```
cursor = -1;  
if(treesize != sb.GetTotal()) {  
    sb.SetTotal(treesize);  
    Refresh();  
}
```

I have looked at the newest night build and there the code seems to be changed slightly.

Have a nice day  
Gabi

Well, all I can suggest is to use and check the latest U++...

Yes, I was using latest dev builds till 2008.1 was released. Then I realized it works good for me so I haven't updated yet - mainly because the GUI of my applications is something like freezed now and not actively developed. Is there any plan for releasing 2009.1, or would you suggest just to install and use dev version from today for example?

Gabi

Thanks for your advice. I've installed upp1032 and I'm impressed - it's fine to see the great advance. Just I can't find package AllFor118n so I copied it from version 2008.1. I will report it in localization thread.

Gabi
