It is now possible assign different colors and font styles (italic, bold) for packages - it affects a way how they are displayed.

I hope this might help navigation in the package list....

Great! But what I found it would be more useful when your package is large is the filter so I could type a part of file name. Or what would be really really cool some smart search popup window similar to one from VS 2010. You type a name, and you can see all files (and packages) from project that match the pattern as well as types, fields etc.

Well, Ctrl+H. But we had that for ages... (and at the moment, it does not match files).

Packages can now be sorted by name (which is now default).

Yep and rest is sorted.

We will see how that works. In any case, you can switch it off (in Setup/Env...)
