as title, when ArrayCtrl is embedded into TabCtrl, i can't use AutoHideSb(), because the vertical scrollbar will fail,the test code is in the additional file.

the result program is like that:

But when i comment this code

// _array.AutoHideSb(true);

everything is fine.

Could someone know how to solve this problem? Thanks a lot.

If you stop calling _array.HeaderObject().Absolute(); there isn't any problem with scrollbar, but you loose horizontal scroll.

I wasn't able to compile your example in Linux until I've changed
typedef _TestArrayCtrl< WithTestArrayCtrlLayout<Ctrl> > testArrayCtrl; // TestArrayCtrl (uppercase T)
and in _TestArrayCtrl<T>::_TestArrayCtrl() constructor
T::_array.AutoHideSb(true);
T::_array.HeaderObject().Absolute();
// etc. because g++ doesn't know from where to get _array.

Anyway, why do you choose to add an array to a tab as a layout and not add it directly?

Bug, fixed. Thanks.

BTW, do not put absolute path into sources.

#define LAYOUTFILE <Test/Test.lay>
