Attached is the OpenBSD 4.4 patch for SVN Rev. 1094.  
Mirek, can you please incorporate it?  
Some files seem to still contain DOS line endings and are therefore marked to be completely replaced.

I had problems with U++ heap implementation in Debug and MT apps, but one can still use malloc (flagUSEMALLOC) in these cases.  
Mirek, what can I do to help get it running with U++ heap?

Matthias

There is a small mistake in Host.cpp line 305, should be:  
`#ifdef PLATFORM_FREEBSD`  
Is there a reason to stick to bash shell in line 217?  
If not, we should call 'sh' instead, since each POSIX system has its own default shell, but they all should have 'sh' installed.

If not, we should call 'sh' instead, since each POSIX system has its own default shell, but they all should have 'sh' installed.

Matthias

Both fixed.
