Hello,

I am looking for a minimalist sqlite/upp example containing two tables to play with. The widgets should be reduced at the mininum. It should have an example of insertion, delete and search. I am a total beginner in this field and the reference examples are very good but too complex. Perhaps somebody has made in the past some working test case that can be posted. It does not matter if the test case is silly or useless.

Thanks a lot,  
Luigi

Take a look at the bazaar/SqlProblem.\*  
It's completely useless and ugly but it has:

- two linked tables
- two dialogs to modify things (sorry no add/delete but it works the same way).
- default data filled on start (insert is used)
- and most of all : less than 200 lines of code (very very small)

The purpose of this example was only to show a bug that I encountered when using SqlLite3 (the bug is corrected now)

Thank you Didier.

That is what I am looking for.

Unfortunately I can't get your package. Can you please pm it to me?

Luigi

Sorry, I was mistaking

It isn't bazaar/SqlProblem but uppdev/SqlProblem

anyway here's the code
