Subject: Svn 1095 breaks linking of PdfDraw on linux
Posted by Didier on Mon, 27 Apr 2009 22:33:09 GMT
View Forum Message <> Reply to Message

Hello,

I was hoping to test some fresh Docking updates but
SVN 1095 broke the linking of the pdfDraw .

SVN 1094 OK
SVN 1095 NOT OK

The errors I get are the following:

Linking...
/home/didier/upphg/out/CtrlLib/GCC.Debug.Debug_full.Gui.Mt.Shared/$blitz.o: In function `Upp::PdfDraw::PdfDraw(Upp::Size_<int>)':

That is weird. It works for me.

What are you trying to compile? On what OS exactly?

That is weird. It works for me.

What are you trying to compile? On what OS exactly?

Mirek

Uhm, I might have found the cause.

There is a new "POSIX" compilation flag and PdfDraw dependency now depends on it (instead of LINUX | FREEBSD).

Means, you need a new theide.. Either compile from src package or for the compilation (using svn sources) add PdfDraw manually.

Mirek

You can also set main configuration flag 'POSIX' manually.

Matthias

Thanks for the SVN correction.

I saw the Problem yesterday but wasn't what correction to do
