
Subject: OrderBy Descending missing

I found this previous topic about the same thing. But it says there is a descending() function, I could find no such thing. So I just added the suggested OrderByDesc() function.

In Sqlexp.h:

```
SqlSelect& OrderByDesc(const SqlSet& columnset);
SqlSelect& OrderByDesc(SqlVal a) { return OrderByDesc(SqlSet(a)); }
SqlSelect& OrderByDesc(SqlVal a, SqlVal b) { return OrderByDesc(SqlSet(a, b)); }
SqlSelect& OrderByDesc(SqlVal a, SqlVal b, SqlVal c) { return OrderByDesc(SqlSet(a, b, c)); }
```

And in SqlStatement.cpp

```
SqlSelect& SqlSelect::OrderByDesc(const SqlSet& set) {
    if(!set.IsEmpty())
        text << " order by " << ~set << " desc";
    return *this;
}
```

In Sqlexp.h:

```
SqlSelect& OrderByDesc(const SqlSet& columnset);
SqlSelect& OrderByDesc(SqlVal a) { return OrderByDesc(SqlSet(a)); }
SqlSelect& OrderByDesc(SqlVal a, SqlVal b) { return OrderByDesc(SqlSet(a, b)); }
SqlSelect& OrderByDesc(SqlVal a, SqlVal b, SqlVal c) { return OrderByDesc(SqlSet(a, b, c)); }
```

And in SqlStatement.cpp

```
SqlSelect& SqlSelect::OrderByDesc(const SqlSet& set) {
    if(!set.IsEmpty())
        text << " order by " << ~set << " desc";
    return *this;
}
```

```
}
```

Well, this is taken from the code I am working on now:

```
sql * Select(ROK, CISLO).From(STIZNOST).OrderBy(Descending(ROK), CISLO);
```

As argument of OrderBy is set, function is must...

Actually, I prefer OrderByDesc and SelectDistinct. The main reason is you can't write

```
Select(Distinct(ID, NAME, AGE))
```

instead one must write

```
Select(Distinct(SqlSet(ID, NAME, AGE)))
```

And what I like

```
SelectDistinct(ID, NAME, AGE) //or  
SelectUnique(ID, NAME, AGE)
```

Same story with Descending.

We could provide `__Expand(SelectDistinct)`. Same should be done with OrderBy (OrderByDesc) and GroupBy. Now only three args can be passed.

Ok, I changed my mind regarding OrderByDesc. I forgot one can mix ascending with descending..
