Hi,

this time just a few corrections, partially not done with the last ones and additionally in ide/Core/Host.cpp:

line 217, change to

```
cmdline = LinuxHostConsole + " sh " + script  
this uses sh instead of bash like I suggested in this topic  
http://www.ultimatepp.org/forum/index.php?t=msg&th=4340&start=0&
```

lines 305-307, change to

```
#ifdef PLATFORM_FREEBSD  
cfg.Add("FREEBSD");  
#endif
```

Matthias

This looks like the same issues as in previous patch...

Anyway, both are there now (well, will be when I commit in the evening

BTW, please, rather post patches like this to "releasing U++" or "technology lab", I can easily miss them here.

Mirek
