
Subject: Compilation with BLITZ is not used in debug version

I updated my upp directory from svn and build theide today (last revision is 1237)

Than I compile my project (MSC9 debug) with BLITZ enabled. But all files were compiled independently without using BLITZ:

----- Core (MSC9 DEBUG DEBUG_FULL WIN32 MSC) (2 / 4)

BlockStream.cpp

Log.cpp

...

What the reason of such behavior? Previous versions of theide works well on the same projects/settings.
