Hi,

attached is another BSD patch tried with FreeBSD and OpenBSD.

I am sorry about my incompetence, but might I ask you to send just changed files (or functions) instead of patch?

Actually, if you know any good tool for Win32 capable of parsing this .patch file format, that would be a good alternative too... I have added some support to theide, but there is way too much .patch formats and does not seem to recognize this particular variant at the moment...

And manual application is way too much work and error-prone.

Mirek

<http://gnuwin32.sourceforge.net/packages/patch.htm>

This is the standard GNU patch ported to Windows. I believe it supports GNU syntax and BSD extensions as well... Does BSD use GNU patch by the way? I think so but I am not sure.

to apply :

cd to the directory containing uppsrc then

patch -p1 < bsd.patch

should work. I just notice that the first patch subset is in an unknown "newdraw" directory, not sure what it refers to... I suggest that masu creates another patch that can be applied to the svn trunk.

(btw svn diff is way easier to use if you are working on a local copy of repository)

regards,
Lionel

I use GIT to checkout U++ SVN tree, that is why I generated the patch also with GIT (git diff) and it should generate (as far as I can remember a unified diff). This can then normally be used directly with 'patch' command like chickenk mentioned, the format should be understood by 'patch'.

I must admit I only generated the patch and did not check, so I will do this and come up with instructions later.

The patch should be applied to 'trunk' there is also 'newdraw' which I also tested.

Far from ideal for me: It means I will have to create the copy, apply patch, compare files, decide if patch is correct, copy changed files....

(note: svn trunk contains 'newdraw' - it is branch of Draw infrastructure being under development now, with the primary goal of separating Draw from host platform GUI)

```
U:\upp.bak>u:\theide\patch -pl < u:\xxx\bsd.patch
u:\theide\patch: **** strip count l is not a number
```

OK, going to do it manually, as usual.

I know I am a looser with this one;)

... patched correctly, thanks!

Next time I submit a patch I'll also give instructions on how to apply it .

Sorry I've missed a typo in uppsrc/Draw/Draw.upp, line
library(BSD) "X11 Xau Xdcmp";
should be
library(BSD) "X11 Xau Xdmcp";
Notice the exchanged letters in Xdmcp ?

Before my previous post I only tested building using newdraw.
